

Meeting with Beverly

May 1982

①

(A)

Fansteel →

3 ponds containing radioactive sodium and thorium;

There are also 4 lower ponds → a pipeline runs from the three radioactive ponds to the lower ponds;

These lower ponds are the ones supposed to be under RCRA → (I think acids) → however there is a possibility

that these lower ponds could also be radioactive because of the pipeline; a guy from the occupational health division, Radium Health unit went on the inspection; he took some samples - inspection was May 5 → Al wrote up report but was not quite finished → if samples are bulk radioactive, industrial waste will give the lead to the radium health guys and ~~is~~ Al will give some assistance; if not radioactive, this portion will remain RCRA and you can request a copy of the report from Al Coulter (or Ken Burns)

problems with dikes/freeboard at ponds → only one pond has a liner -

There are 5 GW monitor wells but they do not have a sampling program in place

① Don Hensch

②

concerned about differences in enforcement
reports → short checklist does not
point out some minor problems →
they want either to know for sure that
violations you point out are major or
all violations →

I told him we would use long
checklist again to make sure we
get all violations noted

① National Zinc → they have asked that the
facility in Bartlesville be delisted →
OK Correspondence ~~for~~ zinc smelter exemption - if a
facility has this exemption OIC
exempts entire facility -
this counts ad solvents on site, etc →
Nat'l. Zinc has a landfill that they
have not requested delisting -
Oklahoma feels they should delist
both & plans to discuss it with
them - no real imp.
